Hey everyone! It's me, Travis, the author of this guide. I've used ElmScan 5 for years on my own car, and since I have a new passion for training other mechanics to use it, I figured that I should document the entire setup in one place. So, without further ado, let's get started! **Setting Up Your ElmScan 5** This installation guide is pretty straightforward, but we'll go over a few setup steps. First, we'll download the latest version of ElmScan from the VAG-web site. Next, we'll unzip the file and make a folder for the ElmScan software. I typically make a folder under "C:Program Files (x86)" and name it "ElmScan." To get started, we'll need to install some tools on our computer to facilitate the scanning process. We'll install the "Zed Camera Link" software on the computer that's going to run ElmScan 5, and install the "Download and Print" software on a laptop or tablet. The Zed Camera Link is a fantastic little application that'll provide your computer and your ElmScan 5 with an easy way to upload photos to a web portal. I've been using it for about 2 years on my own car, and I'm really pleased with how the service works and how the vendor handles issues. Download and Print is a free app that allows you to upload photos from your mobile device to your computer. The process isn't complicated, but it's not as straight-forward as I would like it to be. I've had issues with uploading photos that were too small, or photos that wouldn't save. A firmware update for the app fixed all of these issues, and it's been flawless for me for the past year. The first step is to download the Zed Camera Link app to your computer. I've provided links to both the "Windows 10" and "Mac OS X" versions of the app on my blog. Next, you'll need to install the Download and Print app on your mobile device. I've provided links to the "iOS" and "Android" versions on my blog.
